Sort the Moodle Course Using Groups

When teaching a course with multiple sections, especially when a course has a large number of students, using groups in a course can be useful. Multi-section courses (Meta-linked courses) automatically have groups created for each section, which you can use in addition to, or instead of, your own custom groups.

Create Groups or Groupings in a Course

To view grades for specific groups or sections in your course:

1. Create and Edit Groups and Groupings in Moodle
2. Enable Group Mode in Your Course or Course Activity
3. Create groups in the gradebook. Open the Grader Report. Either
   - Navigation Block > My Courses > Select Course > Grades; or
   - Administration Block > Course Administration > Gradebook Setup > View tab > Grader Report
4. Above the All Participants Header, use the dropdown box to select group to view in the grade book.
